THOROUGHLY TESTED

Since the company was founded in 1998, BEMER has been used by thousands of people. Detailed results were reported in the 2014 clinical evaluation report.

PROVEN AT THE INSTITUTE FOR MICROCIRCULATION BERLIN:

- 27% accelerated vasomotion
- 29% improved blood distribution in the capillary network
- 31% greater venous return
- 29% higher oxygen saturation

The above values represent the maximum values after 30 days of treatment.

SUPPORTS YOUR HEALTH

Physical Vascular Therapy BEMER®

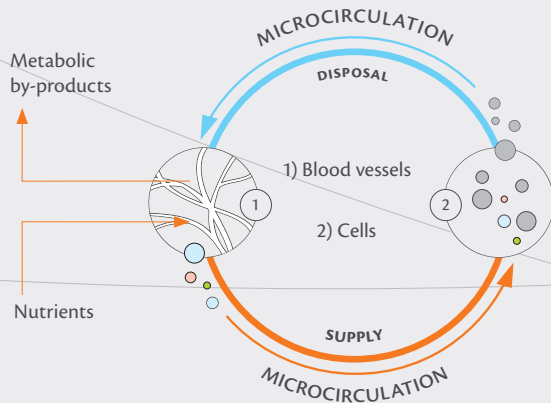

1554-1604en // Rev. 16.4 // Subject to change // © BEMER Int. AG // LI-9495 Triesen

THE ESSENTIAL MICROCIRCULATION

Microcirculation is functionally a very important part of the human vascular system. It performs its function in the intricate network of small and very small blood vessels known as microcirculation. It supplies the cells of the body with oxygen and nutrients, and is a key transport route for the disposal of metabolic by-products.

Impaired microcirculation system can cause or promote many health complaints and diseases.

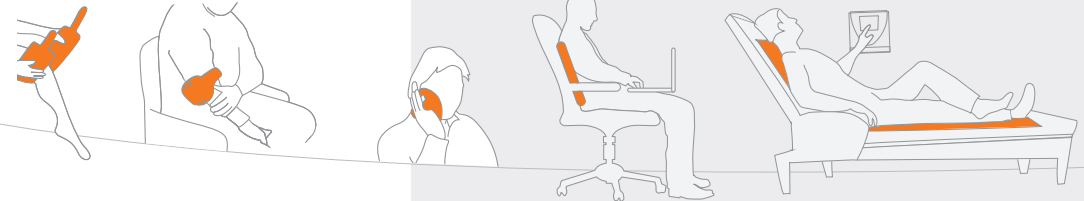

BEMER WORKS

Physical and mental performance, growth and recovery processes and a large number of diseases are directly related to the microcirculatory system.

BEMER stimulates restricted vasomotion (inherent movement of the vessels), thereby bringing about an improvement in the microcirculation. This makes the Physical Vascular Therapy BEMER® an effective supportive treatment.

EASY TO USE ANYWHERE

Application modules: B.PAD, B.SPOT, B.LIGHT, B.SIT and B.BODY

COMFORTABLE AND MODERN

16 MINUTES FOR YOUR HEALTH

Physical Vascular Therapy BEMER® is easy to use and can be applied by anyone. It is used in many medical practices and clinics.

But it provides the greatest benefits in long-term application at home. It is an effective treatment option to support restricted microcirculation. Just 2 x 8 minutes of daily application: **THAT'S HOW EASY IT CAN BE TO DO SO MUCH FOR YOUR HEALTH.**
